/libs	SDK's library. Import it in your app project. - Samsung-health-data-api.aar
/sample-code	App project including sample codes. It's project name is: - HealthDiary
/Tool	DataViewer

Features

Samsung Health Data SDK enable an application to access Samsung Health's selected data.

Health Data Store

An application can read or aggregate the following data with the SDK's APIs. The user's health data is kept secured in the health data store. Available data operators can be different for each data type.

- Active summary
- Active calories burned goal
- Active time goal
- Blood glucose
- Blood oxygen
- Blood pressure
- Body composition
- Exercise

Samsung Health Data SDK

- Exercise location
- Floor climbed
- Heart rate
- Nutrition
- Nutrition goal
- Skin temperature
- Sleep
- Sleep goal
- Steps
- Step goal
- Water intake
- Water intake goal
- User profile

Data Permission

The user's data can be accessed after getting the user's consent clearly.

Device Manager

Saved health data in Samsung Health can be from various connected devices like a Galaxy Watch, Galaxy Ring and a weight scale. DeviceManager provides source device information of saved health data in the Samsung Health's data store.

Restrictions

- Samsung Health Data SDK requires Samsung Health v6.28 or later version installation.
- Samsung Health runs on devices with Android 10 (API level 29) or above.
It is available on all Samsung smartphones and also non-Samsung Android smartphones.
- The SDK doesn't support an emulator.
- Measured data by Samsung Health Data SDK is for fitness and wellness only, not for the diagnosis or treatment of any medical condition.

Release History

1.0.0 beta1 - Oct 21, 2024

- The first release for reading Samsung Health's data.
